CUBEWIRE PROVIDES INFRASTRUCTURE FOR ASIA-PACIFIC'S FIRST INTEGRATED TOKENIZATION AND DIGITAL ASSET SERVICE PROVIDER

Melbourne, Australia, 28th January 2026 — Cubewire today announced it has been selected as the infrastructure partner for the launch of Conduit Digital Holdings, Asia-Pacific's first integrated tokenization and digital asset service provider to investment management firms. Conduit Digital Holdings is part of Conduit Group, Singapore's leading independent financial services firm bridging traditional capital markets with innovative market access.

The launch targets the \$16 trillion global opportunity for tokenized real-world assets, with Conduit Digital Holdings positioned to be the leading provider of tokenization and digital asset services to investment management firms across the Asia-Pacific region.

Conduit Digital Holdings came to Cubewire with a bold vision: to transform institutional treasury management through tokenization. Cubewire provided the infrastructure: a suite of APIs linked to smart contracts that enable end-to-end tokenization of investment funds. Their first product is a tokenized multi-currency Money Market Fund (MMF), domiciled in the Caymans, delivering real-time treasury management for institutional clients.

Traditional treasury operations take three to five days. With Conduit Digital Holdings powered by Cubewire, settlement happens in real-time, 24/7, across any currency or time zone enabling faster settlements, lower costs, and better liquidity management.

This is not a typical vendor-client relationship. Cubewire and Conduit Digital Holdings are building the future of institutional finance together, combining Conduit Group's financial services expertise with Cubewire's enterprise-grade

Web3 infrastructure without compromise on security, compliance, or reliability. Conduit Digital Holdings is among the first warrant users of the Cubewire platform.

”Cubewire understood our vision from day one. Their superior digital asset ecosystem is the bedrock upon which we’ve been able to launch the first integrated tokenization and digital asset service provider to investment management firms in the Asia-Pacific.” — Richard Schroder, CEO, Conduit Digital Holdings

For established funds exploring tokenization, this launch is the proof point. Cubewire provides the enterprise-grade infrastructure needed to bring tokenization to institutional investment management.

About Cubewire— Cubewire is a unified platform driving digital asset adoption with institutional-grade solutions for organisations bridging traditional finance and Web3. Cubewire partners with organisations of all sizes, from emerging fintechs and regional banks to major financial institutions and government agencies, delivering real-world results that are smarter, faster, leaner, and always compliant.
