## CUBEWIRE ACHIEVES ISO/IEC 27001:2022 CERTIFICATION AND SOC 2 TYPE 2 ATTESTATION

**Melbourne, Australia, 25th November 2025** — Cubewire has completed its ISO/IEC 27001:2022 certification and SOC 2 Type 2 attestation; two of the most stringent independent security standards applicable to technology organisations operating in regulated markets.

Both certifications involved rigorous audit and assessment processes by independent assessment bodies covering Cubewire's operational controls, risk assessment and treatment, and the broader security framework underpinning its digital asset infrastructure platform.

ISO/IEC 27001:2022 confirms that an organisation's information security controls satisfy a structured, independently verified framework encompassing risk management, data protection, and operational resilience. SOC 2 Type 2 extends that assurance by demonstrating that these controls have functioned effectively over a sustained period of continuous monitoring, which is an important consideration for regulated enterprises that require verifiable evidence of operational consistency, not simply a point-in-time assessment.

For institutions evaluating digital asset infrastructure partners, these certifications provide concrete affirmation that Cubewire's security controls meet the standards their own compliance and risk frameworks require. Vendor security assessments are a routine part of institutional procurement, and achieving both ISO/IEC 27001:2022 and SOC 2 Type 2 simplifies that process by replacing self-reported claims with audited evidence. As Cubewire continues to transform traditional payment systems with blockchain technology, these certifications reinforce the company's commitment to building secure, transparent infrastructure that meets enterprise requirements.

These certifications also mark a significant point in Cubewire's development. Achieving both certifications simultaneously represents a substantial

organisational undertaking and reflects the depth and maturity of the security program the company has built.

**About Cubewire** — Cubewire is a unified platform driving digital asset adoption with institutional-grade solutions for organisations bridging traditional finance and Web3. Cubewire partners with organisations of all sizes, from emerging fintechs and regional banks to major financial institutions and government agencies, delivering real-world results that are smarter, faster, leaner, and always compliant.
